

The 5G Dominoes Are Starting to Fall Claire Edwards, 12 April 2019

How do you stop the rollout of a 12 trillion dollar technology¹ promoted by one of the most profitable industries on the planet and bulldozed through by the EU, FCC and the whole UN, most notably its WiFi enablers, WHO and ITU?² Many people have said it's impossible. But the dominoes are indeed falling, as cities and entire nations are coming to their senses and putting the brakes on 5G.

For me, it has always seemed an information problem. If the public simply understood the existential threat posed by adopting a military weapon³ as a communications technology, they would not accept it.

The challenge of informing people is twofold. The name 5G is deceptive, implying a simple upgrade from the current 4G or fourth generation wireless. This ruse cleverly disguises the reality that 5G means densification, with each individual, visible antenna being replaced by thousands of tiny antennas menacing people, animals and nature from every nook and cranny on Earth and from 20,000 or more satellites with lethal, laser-like beams hitting their unwitting targets millions of times a day like silent bullets.

The second difficulty is the tight control of the media. Hardly a whisper of negativity about 5G penetrates the public sphere, while its claimed benefits are constantly touted in puff pieces in newspapers and in numerous promotional videos.

Yet in the space of only a year since we first heard about the impending catastrophe that is 5G, the message has spread through the alternative and social media. Now the dominoes are beginning to fall, and it's exponential:

USA, 24 March	Portland Oregon city officials oppose the installation of 5G networks around the city, supported by the mayor and two commissioners. ⁴
Italy, 28 March	Florence applies the precautionary principle, refusing permissions for 5G and referring to "the ambiguity and the uncertainty of supranational bodies and private bodies (like ICNIRP)", ⁵ which "have very different positions from each other, despite the huge evidence of published studies". ⁶

Rome, 28 March	One Roman district votes against 5G trials, with others expected to follow. Other motions to Stop 5G are expected in the four regional councils, one provincial council and other municipal councils of Italy. ⁷
Russia, 28 March	The Russian Ministry of Defence refuses to transfer frequencies for 5G, which effectively delays any 5G rollout there for several years. ⁸
Belgium, 1 April	The Belgian Environment Minister announces that Brussels is halting its 5G rollout plans, saying “The people of Brussels are not guinea pigs whose health I can sell at a profit.” ⁹
Germany, 4 April	Germans sign a petition en masse to force the German Bundestag to debate 5G. ¹⁰
Netherlands, 4 April	Members of Parliament in the Netherlands insist that radiation research be carried out before any approval of the 5G network. ¹¹
USA, 5 April	California Supreme Court Justices unanimously uphold a 2011 San Francisco ordinance requiring telecommunications companies to get permits before placing antennas on city infrastructure. ¹²
Switzerland, 9 April	The Canton of Vaud adopts a resolution calling for a moratorium on 5G antennas until the publication this summer of a report on 5G by the Swiss Federal Office for the Environment. ¹³
Switzerland, 10 April	Geneva adopts a motion for a moratorium on 5G, calling on the Council of State to request WHO to monitor independent scientific studies to determine the harmful effects of 5G. ¹⁴

Since US Senator Blumenthal dealt a major blow to the telecommunications industry by definitively establishing that no safety studies have been done on 5G,¹⁵ the bad news on 5G just keeps on coming. At least 21 US cities have passed ordinances restricting “small cell” installation, and many are charging “recertification fees” to make it unprofitable for the wireless industry.¹⁶ And the UK-based microwave weapons expert Barrie Trower reports that 17 mystery countries are taking steps to avoid getting 5G.¹⁷

While the EU eagerly promotes the rollout of 5G, a new EU report admits that 5G is a massive experiment, lamenting that “the problem is that currently it is not possible to accurately simulate or measure 5G emissions in the real world”. It states that “concern is emerging over the possible impact on health and safety arising from potentially much higher exposure to radiofrequency electromagnetic radiation arising from 5G.” It goes on to set out the dangers: “Increased exposure may result not only from the use of much higher frequencies in 5G but also from the potential for the aggregation of different signals, their dynamic nature, and the complex interference effects that may result, especially in dense urban areas.”¹⁸

Meanwhile, a court in France has recognized electrohypersensitivity as an occupational disease that can be developed also from exposure to levels of radiation that are considered to be safe by the government.¹⁹

5G is beginning to look like an unwanted orphan. Everyone who hears the truth about it shuns it like the plague. Even its proponents clearly have no love for it. President Trump and his fellow billionaires in Palm Beach, Florida, are not having any of it.²⁰ None of the EU institutions in Brussels is having it (European Commission, Council of the European Union, European Council and the European Parliament). And its very enablers, the UN and its WHO and ITU are not going to be having it in Geneva, either. Watch out for

moratoria being declared in Washington, D.C., home to the FCC, and Munich, nearby home to ICNIRP. If that happens, we'll know the game is rigged.

One wonders how the 5G movers and shakers will avoid the satellites, which the 5G literature boasts as being intended to "blanket" the Earth. Perhaps their beams will avoid the areas where they live. Or perhaps not. Unless this insane 5G satellite plan is stopped, they, too, might wake up and find themselves as much guinea pigs as everyone else in this massive biological experiment. 5G stands to make history – just a pity there would be no one left around to celebrate it.
